

90 DEGREE ELBOW

Category: BUTTWELD FITTINGS

90 DEGREE ELBOW is a plumbing fitting specifically designed to change the direction of piping or tubing by 90 degrees. This fitting is crucial for creating sharp turns in fluid flow, allowing for efficient routing in confined spaces. Typically constructed from materials such as PVC, copper, or stainless steel, the 90 DEGREE ELBOW is widely used in various applications, including residential plumbing, HVAC systems, and industrial piping. Its robust design minimizes pressure loss and turbulence, ensuring smooth transitions. The 90 DEGREE ELBOW is essential for maintaining the integrity and efficiency of fluid conveyance systems across diverse installations.
